

**TITLE: PREPARING YOUR MANUSCRIPT\***

These instructions are prepared in the format required for AIAA/ASME Wind Energy Symposium papers.

Author information should appear in one or more lines below the title of the paper.

Please include the following information for each author: company or college; department name or company division; postal address; city, state (spelled out), zip code; country name; e-mail.

**ABSTRACT**

The Abstract should appear at the beginning of your paper. It should be one paragraph of not more than two hundred words summarizing the content of your paper (not an introduction!). It should be complete in itself, having no numerical references or undefined terms.

Indicate the subjects dealt with in the paper and state the objectives of the investigation. Newly observed facts and conclusions of the experiment or argument discussed in the paper must be stated in summary form.

Readers should not have to read the paper to understand the Abstract or the Title.

**HEADINGS**

The title of your paper must be in bold-face capital letters as shown above. The names of the authors, AIAA or ASME member grade, title, business or academic affiliation, and city and state should follow on separate lines in upper- and lower-case letters.

Major headings are underlined, bold-face capitals, centered in the column as indicated above.

Subheadings are underlined and placed flush left in the column on a separate line.

Sub-subheadings are underlined and indented.

**FORMAT**

The length of your manuscript should be limited to 11 single-spaced, two-column pages, including the abstract, references, and figures. (Figures are not required to be in two-column format. Manuscripts must be single-spaced, right-left justified, two-column format, using ten-point Times New Roman or Helvetica fonts, 12 pt. line spacing.

\* Copyright © 2004 by The American Institute of Aeronautics and Astronautics Inc. and the American Society of Mechanical Engineers. All rights reserved.

Or use the other copyright statements cited in the "AIAA/ASME International Joint Clearance and Copyright Assignment" sheet.

Laser-printed copy is preferred. All outside margins are one inch, and the margin between columns is one-quarter inch. Manuscript length should be limited to eleven 8-1/2" x 11" pages, including the Abstract, References, and Figures. (Figures are not required to be in two-column format.) If your paper exceeds eleven pages in length, or you wish to have the AIAA provide individual copies of your paper, please see the "Extra Page/Copies Form" in the Author Kit.

The Paper Number is placed on the first page, one-half inch below the top of the paper, right justified in ten-point bold font, as illustrated above.

NOTE FOR EUROPEAN AUTHORS: If you print your paper on A-4 paper (210mm x 297mm), you should still set the 'Page Setup/Paper Size' to 8 1/2" x 11". Otherwise, the printed version you supply for publication will be reduced during the printing process to fit onto the 8 1/2" x 11" page. This process leaves large margins and smaller than normal print.

**FOOTNOTES**

Footnotes should be marked with superscripts in the text. They should have the following sequence of characters: \*, †, ‡, §, ¶, #, \*\*, ††, ‡‡, §§, ¶¶, ##, ...

**EQUATIONS, NUMBERS, SYMBOLS, AND ABBREVIATIONS**

Equations should be numbered consecutively beginning with (1) to the end of the paper, including any appendices. The number should be enclosed in parentheses (as shown above) and set flush right in the column on the same line as the equation. It is this number that should be used when referring to equations within the text.

Equations should be referenced within the text as "Eq. (x)." When the reference to an equation begins a sentence, it should be spelled out, e.g., "Equation (x)." Formulas and equations should be created to clearly distinguish capital letters from lowercase letters. Care should be taken to avoid confusion between the lowercase "l" (el) and the numeral one, or between zero and the lowercase "o." All subscripts, superscripts,

Greek letters, and other symbols should be clearly indicated. In all mathematical expressions and analyses, any symbols (and the units in which they are measured) not previously defined in nomenclature should be explained. Use only standard symbols and abbreviations in text and illustrations. Use black ink whenever it is necessary to letter mathematical symbols or draw lines by hand.

For engineering numbers, use SI units followed by English units in parentheses.

### **PAGE NUMBERS AND IDENTIFICATION**

Type page numbers on the bottom center of every page, one-half inch from the bottom of the paper.

Write in light blue pencil the principal author's last name in the extreme lower left corner of each sheet for identification purposes.

### **ILLUSTRATIONS, GRAPHS, LINE DRAWINGS, AND CAPTIONS**

All art work, captions, figures, graphs, and tables will be reproduced exactly as submitted. Be sure to position any figures, tables, graphs, or pictures as you want them printed. AIAA will not be responsible for incorporating your figures, tables, etc. (Company logos and identification numbers are not permitted on your illustrations.)

Do not submit graphs on small grid graph paper.

Color photos will not be printed in color unless you have contacted AIAA for a price quote and have included payment with your paper.

### **COPYRIGHT NOTATION**

Copyright notation must appear in the lower left corner of your first manuscript page. Be sure your notation corresponds to the release you have signed on the "AIAA/ASME International Joint Clearance and Copyright Assignment" in the Authors Kit.

• **Release A:** "Copyright © 2004 by the American Institute of Aeronautics and Astronautics, Inc. and the American Society of Mechanical Engineers. All rights reserved."

• **Release B:** "Copyright © 2004 by (insert either your name or your company's name). Published by the American Institute of Aeronautics and Astronautics, Inc. or the American Society of Mechanical Engineers, with permission."

• **Release C:** "This paper is declared a work of the U.S. Government and is not subject to copyright protection in the United States."

• **Release D:** "Copyright © 2004 by the American Institute of Aeronautics and Astronautics, Inc. and the American Society of Mechanical Engineers. No copyright is asserted in the United States under Title 17, U.S. Code. The U.S. Government has a royalty-free license to exercise all rights under the copyright claimed herein for governmental purposes. All other rights are reserved by the copyright owner."

### **REFERENCES**

List and number all bibliographical references at the end of the paper. When referring to them in the text, type the corresponding reference numbers in square brackets after the authors name [1] or at the end of the sentence [1]. The references should be numbered sequentially, as they appear in the text. In the case of two citations, the numbers should be separated by a comma [1, 2]. In the case of more than two reference citations, the numbers should be separated by a dash [5-7].
